

Garage Parking & Access Information

Every resident receives a plastic “reader” to open and close the gates on the garage’s ground floor and on the deeded parking decks where your assigned parking space (or spaces) is/are located.

At ground level (Level 1), touch or wave the reader on or near the gray pad on the entry kiosk. The gate arm will lift automatically.

Level 6 Parkers

From the ground floor, do **not** turn left at the first opportunity; instead, make the **second** left as the ramp curves upward. Continue traveling up until you reach Level 6, where you will use your reader to open the second set of gates. Proceed (slowly) to your assigned parking space, which is numbered on the ground.

Level 7 Parkers

From the ground floor, make the **first left** turn upwards, and continue on to the second gate.

Intercom Assistance

Intercoms are available at the gate kiosks on levels 6 and 7. Press the white button to speak to the front desk staff. In addition, the parking office, located on the ground floor of the garage at the front of the parking lobby elevators, is often attended.

IMPORTANT TIP

Your garage reader operates when your entrance and exit is paired—that is, you use the card to enter the garage and then the next time you exit. If you skip the paired sequence (e.g., if the ground-floor gate is left in the open position and you do not swipe your card), the reader may temporarily malfunction and you will need to get it reset at the front desk of our condominium. So even if a gate is left open for some reason, swipe the reader with your card, anyway.

Note: In the rare event that our parking garage elevator is out of service, see the front desk for instructions on how to use the public garage elevators.
